

IRVANNO TAQI IRMAWAN

Jakarta, Indonesia | 628119121496 | irvanno.taqi@gmail.com

PROFESSIONAL SUMMARY

Fintech product-oriented SDET with 7+ years of experience in digital payments and high-volume transaction systems, transitioning into Product Management. Proven ownership of complex, cross-functional initiatives across consumer engagement and wallet experiences. Strong in product strategy, PRD writing, API/system design fluency, and data-driven iteration (SQL, funnel analysis). Recognized for execution rigor, dependency management, and aligning Engineering, Design, and Business to deliver scalable fintech experiences.

CORE SKILLS

Product Strategy & Roadmapping | End-to-End Product Delivery | PRD Writing | Fintech & Payments | SQL & Funnel Analysis | Experimentation | API & System Architecture | Stakeholder Alignment | Agile Execution | Risk-Based Prioritization

PROFESSIONAL EXPERIENCE

SDET – Consumer Experience (Fintech / Payments)

GoPay (GoTo Financial) | Aug 2024 – Present

- Owned test strategy for GoPay consumer engagement experiences, ensuring reliability, usability, and seamless in-app interactions that drive user engagement.
- Partnered with Product and Engineering to translate business requirements into detailed system flows, edge cases, and API validations, reducing late-stage scope changes.
- Integrated automated test suites into GitLab CI/CD, accelerating regression cycles and strengthening release confidence.
- Proactively identified dependency risks and implementation gaps during sprint planning, reducing production defects across consumer-facing features.

Senior SDET – Fintech & Platform Integration

Tokopedia (ByteDance-acquired e-commerce platform) | May 2019 – Aug 2024

- Spearheaded QA ownership for GoFood–Tokopedia post-merger integration, ensuring seamless interoperability across high-volume fintech systems.
- Reduced regression execution time by 35% through automation (Selenium, Cypress, Appium), enabling faster iteration on payment flows.
- Collaborated closely with Product Managers and Engineering to ship transaction-heavy features under tight timelines.
- Defined end-to-end functional, integration, and performance strategies across payment funnels, strengthening system reliability.
- Mentored junior engineers and institutionalized structured defect triage and risk-based prioritization.

QA Intern – Billing & API Systems

Gojek | Jan 2018 – Mar 2018

- Validated critical billing systems and API integrations, uncovering high-impact edge cases prior to release.
- Partnered with engineers to reproduce and resolve defects, improving pre-release detection in core financial systems.

EDUCATION

Bachelor of Computer Science – Universitas Indonesia | 2019
